

Remote Database Administration

For MS-SQL

How do you support an extensive database infrastructure with limited budget and/or expertise? CenterBeam provides remote database administration for mid-size organizations in need of specialized resources to support their IT infrastructure.

With the CenterBeam Remote Database Administration (DBA) service for MS-SQL, you can offload the complexities and minimize the risks surrounding mission-critical database applications. CenterBeam's Remote DBA service focuses on the cost-effective delivery of the key challenges facing IT organizations:

- > **High availability**
- > **High reliability**
- > **Optimal performance**

The CenterBeam certified database administrators, managing and maintaining your Microsoft® SQL Server® databases remotely, will work with you to implement a database backup process, ensure your data is secure, and provide SQL Server tuning and optimization—including evaluation and recommendations for your environment.

Why Remote Database Administration?

Few companies consider database administration to be a core competency. However, all companies utilize databases to take orders, attract new customers, market their businesses, and deliver business automation. Remote database administration allows you to focus on your core competencies while maximizing utilization of cutting edge database technologies in a cost efficient manner.

With the CenterBeam Remote DBA service, you can:

- Reduce costs while achieving a predictable budgetary schedule
- Expand IT application support bandwidth without increasing headcount, refocus your existing database administration staff on strategic initiatives; or avoid the cost of hiring of a full-time senior in-house DBA
- Eliminate the complexity of licensing and maintaining robust, expensive (and all too often inadequate) database monitoring hardware and software infrastructures
- Ensure consistency during unpredictable reorganizations such as turnover, extended leave and downsizing

Why Choose the CenterBeam Remote DBA Service?

CenterBeam offers an established and proven methodology for providing high-end database administration services that are cost-effective. The CenterBeam Remote DBA service sets the standard for remote database administration and offers:

- A comprehensive program which includes proactive monitoring, corrective and preventative maintenance, and development services
- Sophisticated monitoring and reporting tools and processes
- 100 years of total senior-level DBA experience

What Does the CenterBeam Remote DBA Service Provide?

The CenterBeam Remote DBA service is a premier service offering of remote database administration and provides the following key services:

- **Monitoring**
 - » Proactive 24/7 Database Monitoring
 - » Monitoring MS SQL activity
 - » Monitoring Database Performance
 - » Monitoring Database Security
- **Maintaining**
 - » Database Maintenance
 - » Database Tuning and Optimization
 - » Backup and Restore Strategy
 - » Performance Strategy
- **Administering**
 - » Database Replication
 - » Database Log Shipping
 - » Risk Assessment
 - » SQL Configuration

How Does the CenterBeam Remote DBA Service Work?

Simple. In order to monitor your MS-SQL Server, CenterBeam will only need access to the SQL Server:

- Only SQL Port access required (port 1433)
- System Administrator Privileges required
- No operating system access is required
- No software installed on the box
- CenterBeam monitors the SQL Server via SQL Access only
